

NEWS RELEASE – August 2008 Cambridge UK

Piranesi support for modo 302

Users of modo 302 from Luxology – which provides true 3D sculpting tools to model, sculpt, paint, and render images – can now create hand rendered presentations of their 3D models with Piranesi, the award winning “3D Painting” technology. Informatix Software International Ltd recently developed the EPix file exporter using the modo File I/O SDK. The plug-in is available as a free download from <http://www.piranesi.co.uk>

Bob Bennett, Vice President of Marketing for modo, says “Piranesi is one of the cooler applications for giving a hand rendered look to your 3D model with a minimum of fuss. Many times that is exactly what you want to deliver to your AEC clients, particularly in the early stages of a project. This software would appear to be a good match for use alongside modo, and Piranesi runs on both the Mac and PC's just like modo does.”

modo is recognised as one of the quickest and easiest polygon/subdivision surface modellers available, enabling architects and visualisation specialists to create more detailed models in a shorter timeline. modo 302 allows you to render to Piranesi's EPix file format in which every pixel has a depth and material value as well as a colour. Piranesi can quickly paint in textures and details such as people, furniture, or plants.

For more information on Piranesi, please visit the Piranesi web site at <http://www.piranesi.co.uk> or email info@piranesi.co.uk

More on Informatix Software International Ltd.

Informatix Software International Ltd specialise in software for the architectural, engineering, construction, and facility management industries. Based in Cambridge, England, they sell their products online and through an international network of distributors. For more information, visit the Informatix web site at <http://www.informatix.co.uk/>, or telephone (UK+44) 1223 246777, or email info@informatix.co.uk

More on modo 302 from Luxology

modo is the modern 3D software for the Mac and PC which includes an artist-focused array of tools for producing detailed models and presentation quality images. The software includes the ability to light a scene with IES lighting fixtures or to cast accurate sunlight based on location and time of day. A free trial and extensive gallery of sample images is available at <http://www.luxology.com>
